

**Progressive Insurance  
Regional Claims Office**

**Westwood, Massachusetts**

**Site Development, Permitting  
& Construction Oversight**

**Project Description**

Coneco provided Engineering, Permitting and Surveying related services as part of this state of the art 21,000 square foot Progressive Insurance R.C.O. facility. Site engineering included associated parking, loading and secure storage areas, grading, site utility design including coordination with MWRA, Algonquin and National Grid, stormwater management facilities in accordance with the Massachusetts DEP Stormwater Regulations, lighting, landscaping and detailed demolition planning. Extensive coordination was required with the Towns of Westwood and Norwood due to parcel location and proximity to US Route 1. Coneco provided on site construction oversight throughout the project duration for the client as well as construction related services including shop drawing review, contractor requisitions and value engineering. Coneco provided permitting services for this challenging site as a result of pro-

posed disturbance within the riverfront buffer zone. Working closely with the Conservation Commission, Coneco designed and coordinated construction of the first functional “rain garden” in the Town of Westwood.

The new Claims Office, which opened in the Fall of 2013, has been a dramatic improvement aesthetically to a once degraded site.

The new Claims Office, which opened in the Fall of 2013, has been a dramatic improvement aesthetically to a once degraded site.
