

Confidential Municipal Client

NPDES MS4 Compliance Assistance

Project Description

Coneco has been assisting a number of Massachusetts communities with their compliance with the U.S. EPA's Small MS4 General Permit Stormwater Program. Our assistance has included the preparation of annual reports to the EPA, illicit discharge detection and elimination (IDDE) program development and implementation, and stormwater management planning. For one Massachusetts municipal client, Coneco recently completed a town-wide outfall mapping and sampling program as a component of a larger IDDE program. For this community, Coneco assisted in the development of the mapping and sampling program, collected wet and dry weather outfall samples from approximately 100 MS4 regulated outfalls, and evaluated all data in accordance with the community's established IDDE program for presentation to the EPA.
